REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Even though Hillbig teaches the oxidative degradation of carboxymethylcellulose using hydrogen peroxide at a concentration of 1.42%, there is no teaching of the adjustment of pH of the reaction mixture above 4.5 during or after the decomposition. Angerer et al teach that the amount of hydrogen peroxide needed for depolymerization varies according to the polysaccharide. The instant process however, uses hydrogen peroxide at a concentration range of 0.5 to 1.8 weight percent with respect to the dry cellulose ether and the pH is set above 4.5. These limitations as instantly claimed are neither taught or fairly suggested by the prior art.

Any comments considered necessary by the applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".

Any inquiry concerning this communication should be directed to James O. Wilson, Primary Examiner in Art Unit 1623 at 571-272-0661.
